

Readme of BTR guidance and roadmap tool

Minimum requirements

The *BTR guidance and roadmap tool* is an excel-based tool tested with MS Excel version 2016 onwards. For the generation of the roadmap, this version of the tool uses libraries that requires internet connection.

A PDF reader is needed to access several additional documentation provided in the tool.

How to enable macros in MS excel

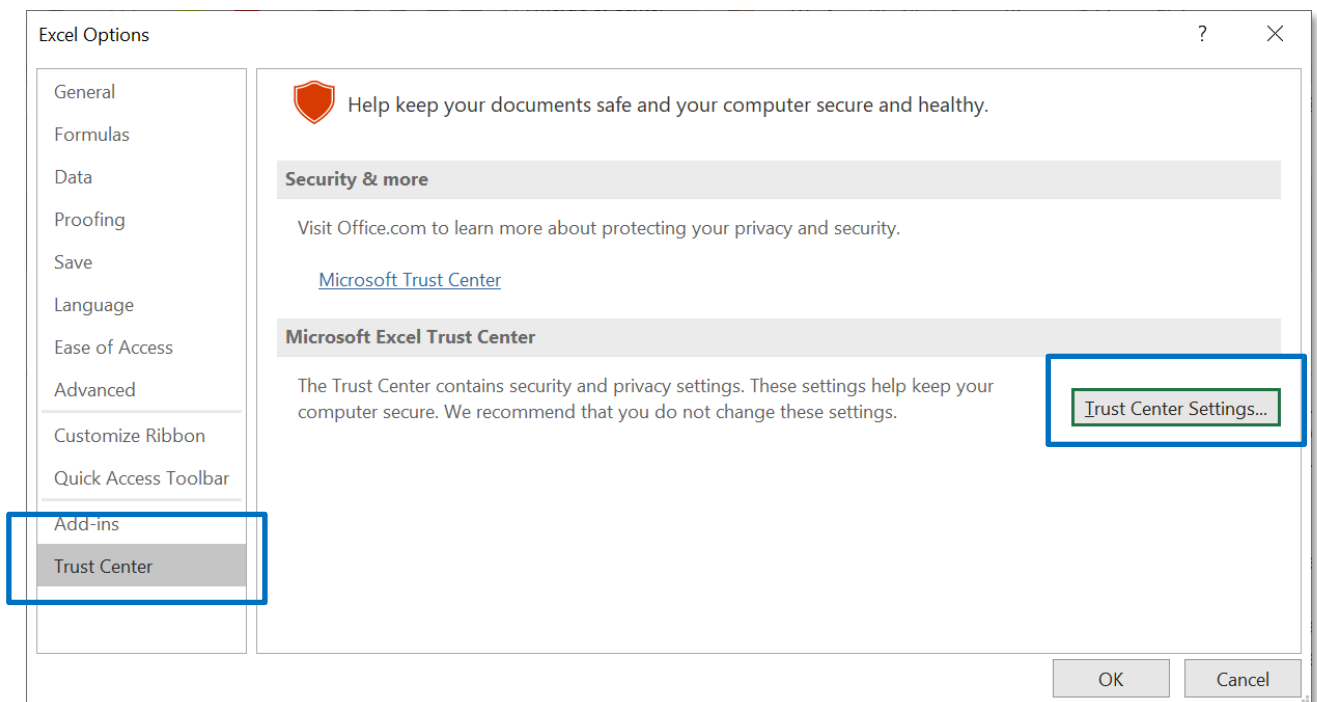

The "**BTR guidance and roadmap tool**" contains MS Excel procedure, powered by using Visual Basic for Applications (VBA) Macro scripts that are written to automate and perform tasks.

Not in the case of "BTR Roadmap Tool", but some macros can pose a potential security risk. For this reason, your computer or into your organization's network Macros could be disabled by default.

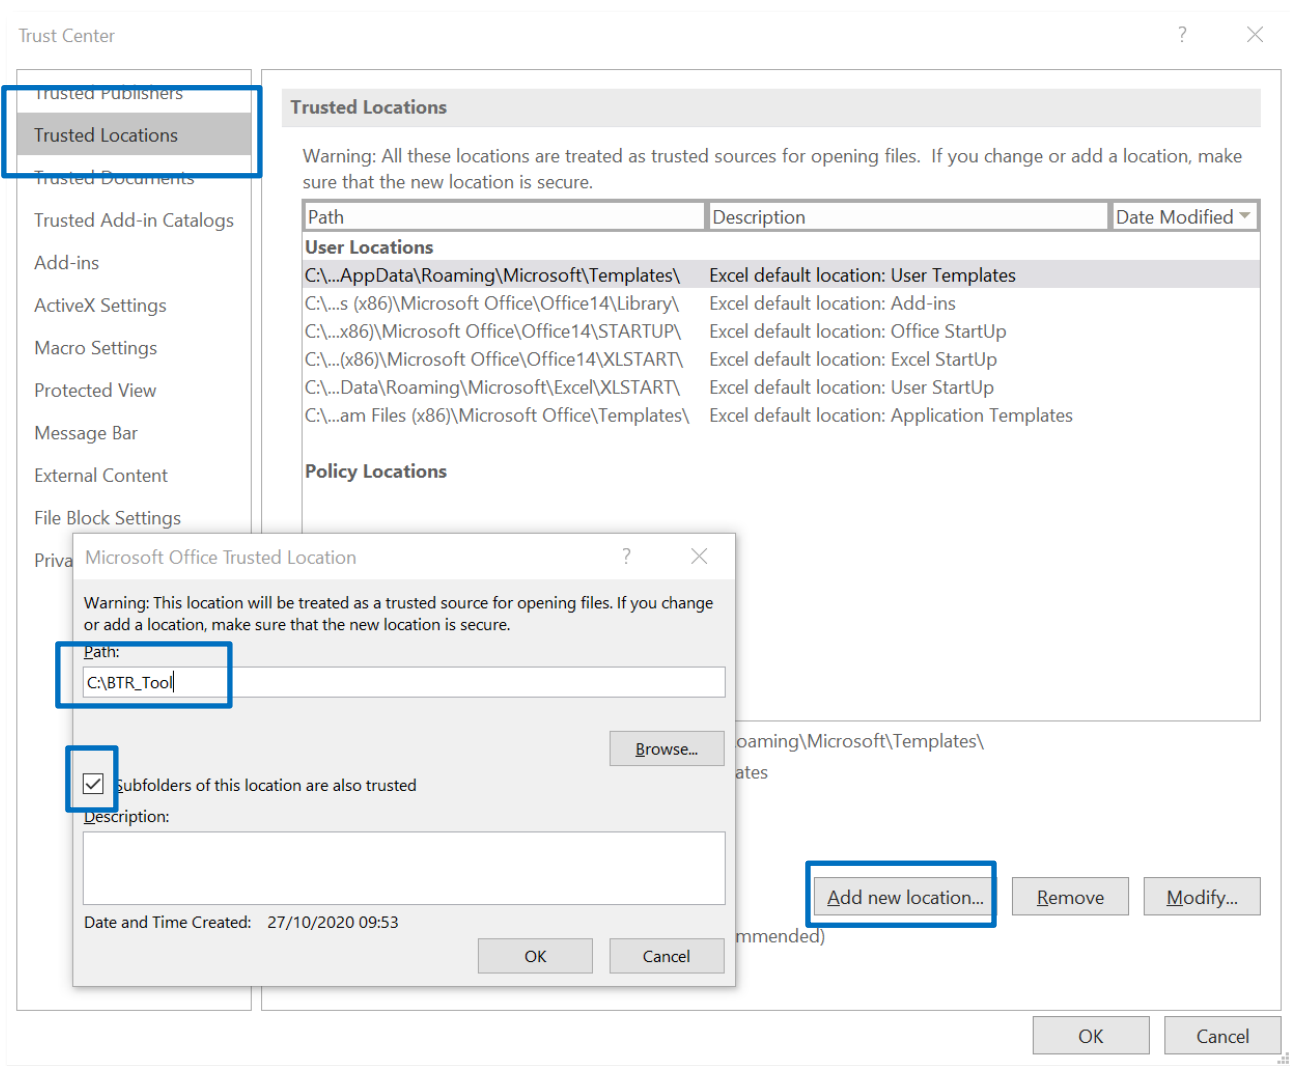

You can change macro security settings in the Trust Center, unless a system administrator in your organization has changed the default settings to prevent you from changing the settings.

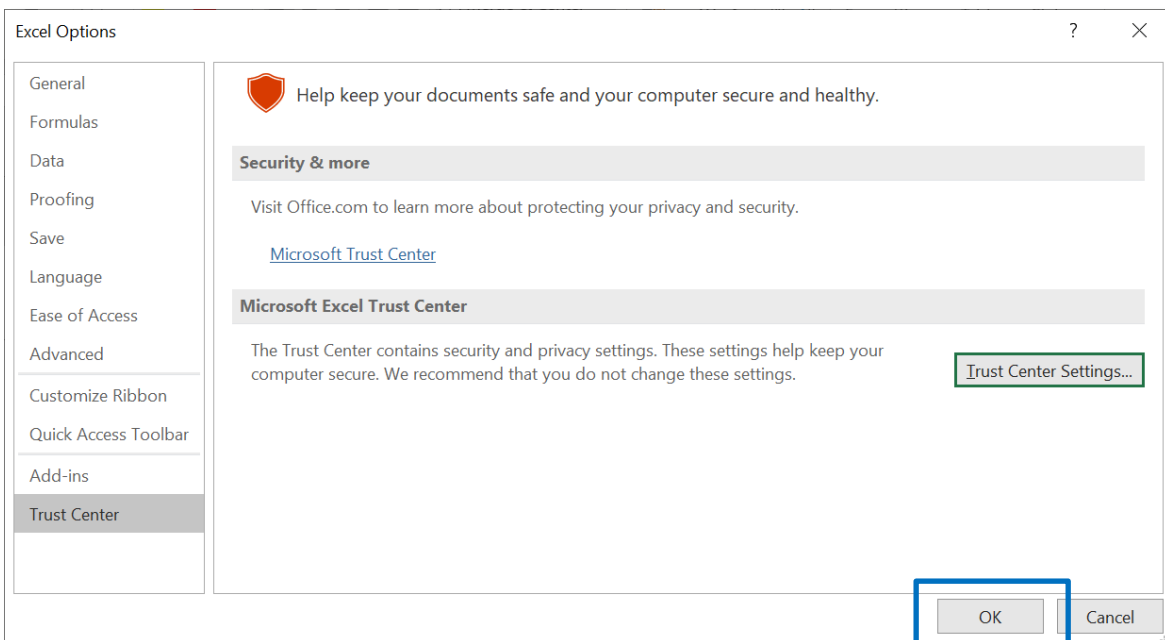

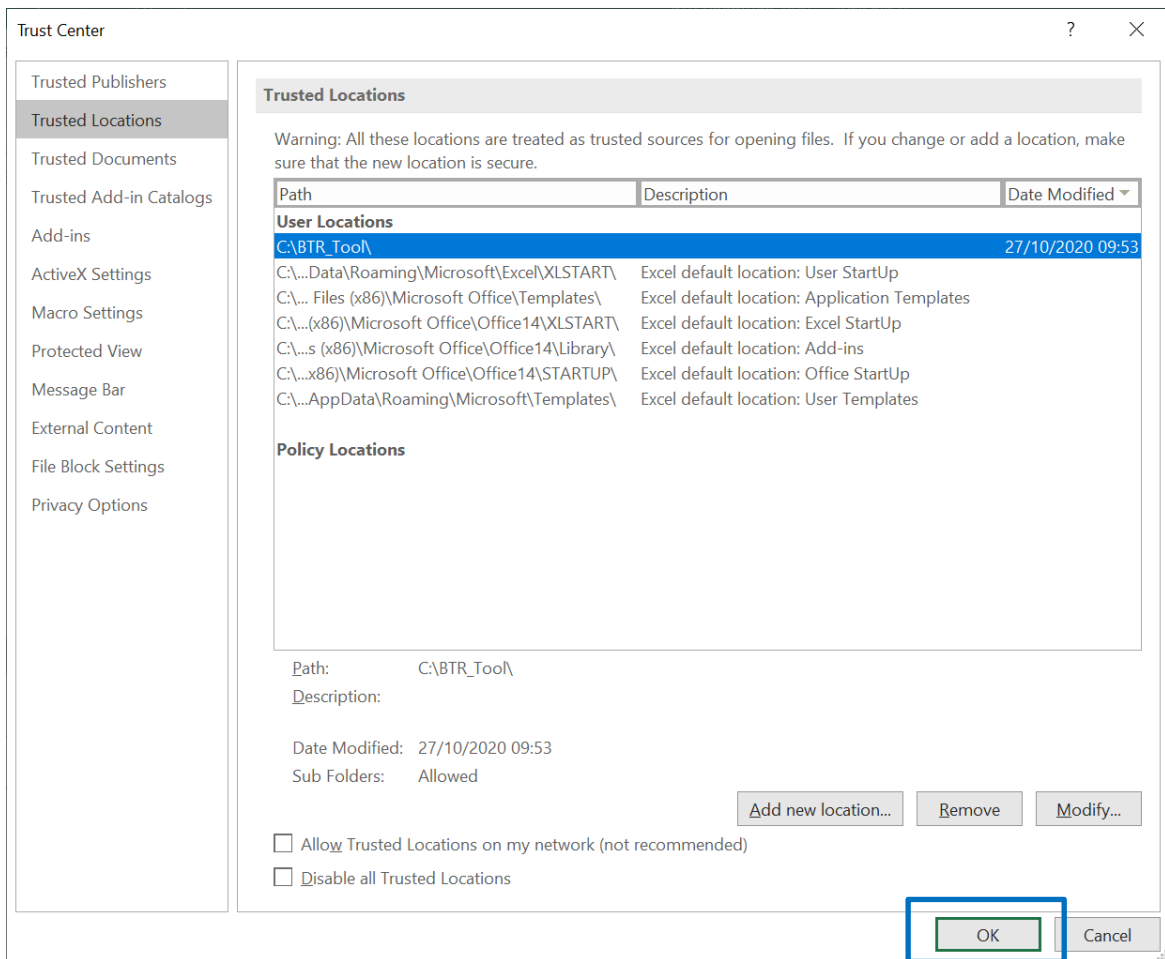

You can access the Trust Center in Excel Options to do the following:

1. In Excel program, on the **File** tab, click **Options** (Excel 2010 to 2016 versions) or **Microsoft Office Button**  (Excel 2007);
2. Click **Trust Center**, and then click **Trust Center Settings**.

3. **Add the full path** of the folder where the BTR Excel Tool files are located. In the **Path** box, type the name of the folder that you want to use as a **trusted** location, or click Browse to locate the folder. Also remember to select the “*Subfolders of this location are also trusted*” check box

4. Close and restart the Excel program.

Important: Changing Trust Center settings can greatly reduce or increase the security of your computer, its data, data on your organization's network, and other computers on that network. We advise that you consult with your system administrator, or carefully consider the risks, before making changes to Trust Center settings.
