PROJECT INFORMATION MATTERS

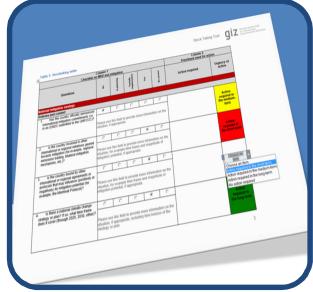

BUR Process Guidance Tool (2016)

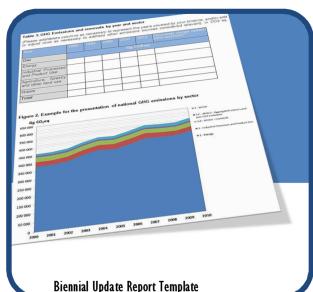

BUR Process Guidance Tool
For BUR/ICA process by non-Annex I Parties

This tool has been developed to support countries in the process of preparing a BUR and undergoing the International Consultation and Analysis (ICA), while at the same time enhancing domestic MRV systems. It guides users through a six step process, helping to understand what the key steps are, what to consider when implementing those steps and what the required potential time duration would be, taking into account specific national circumstances. It thus can also be used as a planning tool that can be applied flexibly by countries.

BUR Template (2017)

The template was developed on the basis of the UNFCCC guidelines for the preparation of biennial update reports (UNFCCC decision 2/CP.17, annex III.). It sets out a proposed BUR structure and provides guidance on how to present the required information, including using tables. It also contains guiding questions to assist in the drafting of the chapters. It further builds upon experiences of the project partner countries and lessons learned at regional workshops, as well as from applying the Stock Taking Tool.

Biennial Update Report Template

Stock Taking Tool (2017)

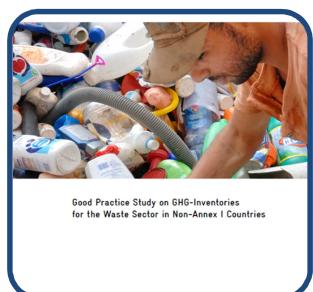

An analytical tool that countries can apply to identify prioritised action for national MRV systems including mitigation pledge(s) in the context of nationally determined contributions (NDCs), nationally appropriate mitigation actions (NAMAs) and low emission development strategies (LEDS). Its aim is to guide countries in assessing the current national mitigation architecture and to provide an information basis for planning and implementing mitigation actions.

Preparing for the ICA Process: Required Efforts and Capacities Needed (2015)

This guidance aims to support Non-Annex I Parties in preparing for the International Consultation and Analysis (ICA) process under the UNFCCC and shows what efforts and capacities might be required as part of their preparation. The paper draws upon experiences from the Information Matters project. It firstly describes the ICA process in detail, taking into account experiences with the implementation of the ICA process. Secondly, it considers how countries can get ready to participate in the ICA process by identifying necessary preparation steps and related capacity needs.

(Good) Practice Study on GHG Inventories in the Waste Sector of Non-Annex I Parties (2015)

The study aims to provide comprehensive guidance to policy makers and practitioners in developing countries [Non-Annex I countries to the United Nations Framework Convention on Climate Change (UNFCCC)] for the preparation of national greenhouse gas (GHG) inventories for the waste sector.
